RE: March Inland Port Taxiway Shoulder Slurry Seal and Striping

Dear Mr. Nelson,

It is with great pleasure to inform you that your team did an outstanding job on our airport project. We are completely satisfied with the quality of your product and professional application of the slurry; considering the condition of our dilapidated asphalt shoulders. I feel the preparation work went beyond project scope, followed by your willingness to work with us on the miscalculation of square footage. The service and product you provided is unprecedented.

We would like to recognize Richard Sherman for his professional representation of your fine company and for working to provide a competitive cost proposal for the slurry work needed at March Inland Port. We would also like to recognize Charles Howard for his expeditious response to our desire to initiate the project in short order. Furthermore, his management of the project was most impressive. We also want to commend Ralph Cervantes and his crew for their organized and professional project performance. The quality of your deliverable was higher than we expected. You truly have a superior product. Your company's application of the product by your well trained labor and talented management is evident in the end product.

As a concession for your outstanding performance, please feel free to utilize our airport project as a demonstration of your product and quality of workmanship to potential customers as needed. Simply contact me and I will gladly provide access to the project area when required.

We hope to complete more projects together in the near future. I have added NPG Inc. to our RFP list; which means you will receive direct mailings of March Inland Port projects. Feel free to use this letter as a "reference letter" or simply ask, and I will gladly produce reference letters as required.

Most sincerely,

Gary W. Gosliga
Airport Director
